

## practical 1a.

Create a simple calculator application using servlet.

### index.html

```
<html>
<head>
  <title>Calculator App</title>
</head>
<body>
  <form action="CalculatorServlet" >
    Enter First Number    <input type="text" name="txtN1"
  ><br>
    Enter Second Number  <input type="text" name="txtN2"
  ><br>
    Select an Operation   <input type="radio" name="opr"
value="+">
    ADDITION <input type="radio" name="opr" value="-">
    SUBTRACTION <input type="radio" name="opr" value="*">
    MULTIPLY <input type="radio" name="opr" value="/">
    DIVIDE <br> <input type="reset">
    <input type="submit" value="Calculate" >
  </form>
</body>
</html>
```

## Add a new Servlet to source package

**Check “Add information to deployment descriptor” to add servlet into web.xml  
But preferably use annotation.**

## CalculatorServlet.java

```
package mypack;
import java.io.IOException;
import java.io.PrintWriter;
import javax.servlet.ServletException;
import javax.servlet.http.HttpServlet;
import javax.servlet.http.HttpServletRequest;
import javax.servlet.http.HttpServletResponse;
public class CalculatorServlet extends HttpServlet
{
    public void doGet(HttpServletRequest request, HttpServletResponse
response)
        throws ServletException, IOException
    {

        response.setContentType("text/html;charset=UTF-8");
        PrintWriter out = response.getWriter();
        out.println("<html><head><title>Servlet
CalculatorServlet</title></head><body>");
        double n1 = Double.parseDouble(request.getParameter("txtN1"));
        double n2 =
Double.parseDouble(request.getParameter("txtN2"));
        double result =0;
        String opr=request.getParameter("opr");
        if(opr.equals("+")) result=n1+n2;
        if(opr.equals("-")) result=n1-n2;
        if(opr.equals("*")) result=n1*n2;
        if(opr.equals("/")) result=n1/n2;
        out.println("<h1> Result = "+result);
        out.println("</body></html>");
    }
}
```

## Output:

Enter First Number 45

Enter Second Number 60

Select an Operation ☒ ADDITION ☐ SUBTRACTION ☐ MULTIPLY ☐ DIVIDE

Reset Calculate

Result = 105.0

**Result = 105.0**

### Practical 1b.

Create a servlet for a login page. If the username and password are correct then it says message "Hello <username>" else a message "login failed"

#### index.html

```
html>
  <head>
    <title>Login Form</title>
  </head> <form action="LoginServlet" >

    Enter User ID<input type="text" name="txtId"><br>
    Enter Password<input type="password" name="txtPass"><br>
    <input type="reset">
    <input type="submit" value=" Click to Login " >
  </form>
</html>
```

#### LoginServlet.java

```
package mypack;
import java.io.*;
import javax.servlet.ServletException;
import javax.servlet.http.*;
```

```

public class LoginServlet extends HttpServlet
{
    public void doGet(HttpServletRequest request, HttpServletResponse
response)
        throws ServletException, IOException
    {
        response.setContentType("text/html;charset=UTF-8");
        PrintWriter out = response.getWriter();
        out.println("<html><head><title>Servlet
LoginServlet</title></head>");
        String uname = request.getParameter("txtId");
        String upass = request.getParameter("txtPass");
        if(uname.equals("admin") && upass.equals("12345"))
        {
            out.println("<body bgcolor=blue >");
            out.println("<h1> Welcome !!! "+uname+"</h1>");
        }
        else
        {
            out.println("<body bgcolor=red >");
            out.println("<h1> Login Fail !!! </h1>");
        }
        out.println("</body></html>");
    }
}

```

## Practical 1c.

Create a registration servlet in Java using JDBC. Accept the details such as Username, Password, Email, and Country from

the user using HTML Form and store the registration details in the database.

### **MySql queries**

```
create database LoginDB;  
use LoginDB;
```

```
create table user(username varchar(20) PRIMARY KEY, password  
varchar(20), email varchar(20),country varchar(20));
```

```
insert into user values ('admin','admin','admin@admin.com','India');  
select * from user;
```

### **index.html**

```
<html>  
  <head>  
    <title>Registration Page</title>  
  </head>  
  <body>  
    <form action="RegisterServlet" >  
      <H1>Welcome to Registration page</H1>  
      Enter User Name  
      <input type="text" name="txtUid"><br>  
      Enter Password  
      <input type="password" name="txtPass"><br>  
      Enter Email      <input type="text" name="txtEmail" ><br>  
      Enter Country    <input type="text" name="txtCon" ><br>  
      <input type="reset" >  
      <input type="submit" value="REGISTER" >  
    </form>  
  </body>  
</html>
```

### **RegisterServlet.java**

```
package mypack;  
import java.io.*;  
import java.sql.*;  
import javax.servlet.*;  
import javax.servlet.http.*;  
  
public class RegisterServlet extends HttpServlet {  
    public void doGet(HttpServletRequest request,HttpServletResponse  
response)
```

```

        throws ServletException, IOException {
            response.setContentType("text/html;charset=UTF-8");
            PrintWriter out = response.getWriter();
            String id = request.getParameter("txtUid");
            String ps = request.getParameter("txtPass");
            String em = request.getParameter("txtEmail");
            String co = request.getParameter("txtCon");
            try{
                Class.forName("com.mysql.jdbc.Driver");
                Connection con
                =DriverManager.getConnection("jdbc:mysql://localhost:3306/logindb","
                root","hr");
                PreparedStatement pst = con.prepareStatement("insert into user
                values(?,?,?,?)");
                pst.setString(1,id);
                pst.setString(2,ps);
                pst.setString(3,em);
                pst.setString(4,co);
                int row = pst.executeUpdate();
                out.println("<h1>"+row+ " Inserted Succesfullyyyyy");
            }
            catch(Exception e){out.println(e);}
        }
    }
}

```

## Welcome to Registration page

Enter User Name

Enter Password

Enter Email  ×

Enter Country

**1 Inserted Succesfullyyyyy**

```
mysql> select *from user;
ERROR 1046 (3D000): No database selected
mysql> use logindb;
Database changed

```

## Practical 2a.

**Using Request Dispatcher Interface create a Servlet which will validate the password entered by the user, if the user has entered "Servlet" as password, then he will be forwarded to Welcome Servlet else the user will stay on the index.html page and an error message will be displayed.**

### index.html

```
<html>
  <head>
    <title>Login Form</title>
  </head> <form action="LoginServlet" >
    Enter User ID<input type="text" name="txtId"><br>
    Enter Password<input type="password" name="txtPass"><br>
    <input type="reset"> <input type="submit" value=" Click to
Login " >
  </form>
</html>
```

### LoginServlet.java

```
package mypack;
import java.io.IOException;
import java.io.PrintWriter;
import javax.servlet.ServletException;
import javax.servlet.http.HttpServlet;
```

```

import javax.servlet.http.HttpServletRequest;
import javax.servlet.http.HttpServletResponse;
import javax.servlet.RequestDispatcher;
public class LoginServlet extends HttpServlet
{
    public void doGet(HttpServletRequest request,HttpServletResponse
response)
        throws ServletException, IOException

    {
        response.setContentType("text/html;charset=UTF-8");

        PrintWriter out = response.getWriter();
        out.println("<html><head>");
        out.println("<title>Servlet LoginServlet</title></head>");
        String uname = request.getParameter("txtId");
        String upass = request.getParameter("txtPass");
        if(uname.equals("admin") && upass.equals("servlet"))
        {
            out.println("<body bgcolor=blue >");
            out.println("<h1> Welcome !!! to the world of servlet </h1>");
        }
        else
        {
            out.println("<body bgcolor=red >");
            out.println("<h1> Login Fail !!! </h1>");
            RequestDispatcher rd =
request.getRequestDispatcher("index.html");
            rd.include(request, response);
        }
        out.println("</body>");
        out.println("</html>");
    }
}

```

### **NewServlet.java**

```

package mypack;
import java.io.IOException;
import java.io.PrintWriter;
import javax.servlet.ServletException;
import javax.servlet.http.HttpServlet;
import javax.servlet.http.HttpServletRequest;
import javax.servlet.http.HttpServletResponse;
import javax.servlet.RequestDispatcher;
public class NewServlet extends HttpServlet {

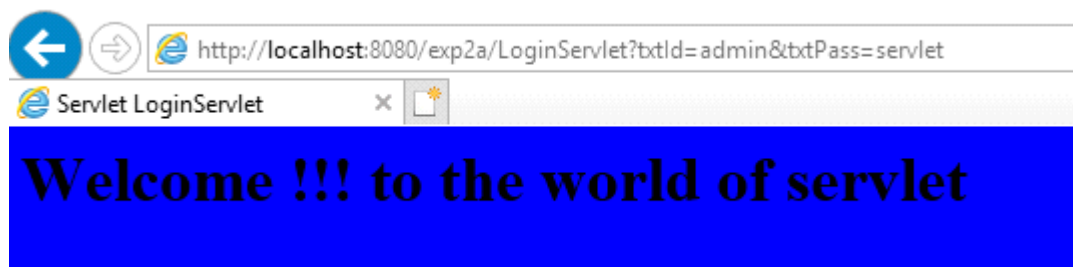

```

```

public void doGet(HttpServletRequest request, HttpServletResponse
response)
throws ServletException, IOException {
response.setContentType("text/html;charset=UTF-8");
PrintWriter out = response.getWriter();
out.println("<html><head>");
out.println("<title>Servlet LoginServlet</title></head>");
String uname = request.getParameter("txtId");
String upass = request.getParameter("txtPass");
if(uname.equals("admin") && upass.equals("servlet")){
RequestDispatcher rd = request.getRequestDispatcher("NewServlet");
rd.forward(request, response);
}
else{
out.println("<body bgcolor=red >");
out.println("<h1> Login Fail !!! </h1>");
RequestDispatcher rd = request.getRequestDispatcher("index.html");
rd.include(request, response);
}
out.println("</body>");
out.println("</html>");
}
}

```

## Practical 2b.

## **Create a servlet that uses Cookies to store the number of times a user has visited servlet.**

### **index.html**

```
<html>
<head><title>Cookie Demo</title></head>
<body>
<form action="Page1" >
  Enter Your Name <input type="text" name="txtName"><br>
<input type="submit" value="~~~ Click to Enter ~~~">
</form>
</body>
</html>
```

### **Page1.java**

```
package mypack;
import java.io.IOException;
import java.io.PrintWriter;
import javax.servlet.ServletException;
import javax.servlet.http.HttpServlet;
import javax.servlet.http.HttpServletRequest;
import javax.servlet.http.HttpServletResponse;
import javax.servlet.http.Cookie;
public class Page1 extends HttpServlet {
public void doGet(HttpServletRequest request, HttpServletResponse response)
throws ServletException, IOException {
  response.setContentType("text/html;charset=UTF-8");
  PrintWriter out = response.getWriter();
  out.println("<html><head><title>Page1</title></head>");
  out.println("<body bgcolor=pink >");
  String uname = request.getParameter("txtName");
  out.println("<h1>~~~ Welcome "+uname+"</h1>");
  Cookie ck1 = new Cookie("username", uname);
  Cookie ck2 = new Cookie("visit","1");
  response.addCookie(ck1); response.addCookie(ck2);
  out.println("<h1><a href=Page2 >Click to visit Page 2 </a></h1>");
  out.println("</body>");
  out.println("</html>");
}
}
```

### **Page2.java**

```
package mypack;
import java.io.*;
import javax.servlet.ServletException;
import javax.servlet.http.*;
public class Page2 extends HttpServlet {
public void doGet(HttpServletRequest request, HttpServletResponse response)
```

```

throws ServletException, IOException {
response.setContentType("text/html;charset=UTF-8");
PrintWriter out = response.getWriter();
out.println("<html><head><title>Page2</title></head>");
out.println("<body bgcolor=yellow >");
Cookie [] ck = request.getCookies();
for(int i=0;i<ck.length;i++){
if(ck[i].getName().equals("visit")){
int count = Integer.parseInt(ck[i].getValue())+1;
out.println("<h1>Visit No : "+count+"</h1>");
ck[i] = new Cookie("visit",count+"");
response.addCookie(ck[i]);
}
else {
out.println(ck[i].getName()+ " = "+ck[i].getValue()); }
out.println("<h1><a href=Page3 >Click to visit Page 3 </a></h1>");
out.println("<h1><a href=Page4 >Click to visit Page 4 </a></h1>");
out.println("<h1><a href=Page5 >Click to visit Page 5 </a></h1>");
out.println("</body>");
out.println("</html>");
}}

```

Enter Your Name

~~~ Click to Enter ~~~

username = dman

[Click to visit Page 3](#)

[Click to visit Page 4](#)

[Click to visit Page 5](#)

Visit No : 2

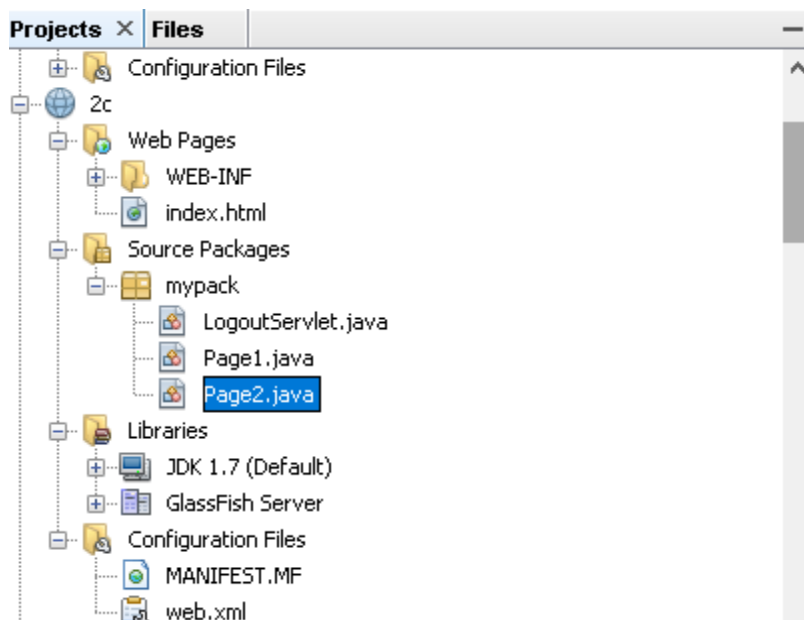

[Click to visit Page 3](#)

[Click to visit Page 4](#)

[Click to visit Page 5](#)

## Practical2c.

**Create a servlet demonstrating the use of session creation and destruction. Also check whether the user has visited this page first time or has visited earlier also using sessions.**

### index.html

```
<html>
<head><title>Session Demo</title></head>
```

```
<form action="Page1" method="get" >
Enter User ID <input type="text" name="txtName"><br>
<input type="reset" ><input type="submit" >
</form>
</html>
```

## **LogoutServlet.java**

```
package mypack;
import java.io.IOException;
import java.io.PrintWriter;
import javax.servlet.ServletException;
import javax.servlet.http.HttpServlet;
import javax.servlet.http.HttpServletRequest;
import javax.servlet.http.HttpServletResponse;
public class LogoutServlet extends HttpServlet {
public void doGet(HttpServletRequest request, HttpServletResponse
response)
throws ServletException, IOException {
response.setContentType("text/html;charset=UTF-8");
PrintWriter out = response.getWriter();
out.println("<html><head><title>Servlet
LogoutServlet</title></head>");
out.println("<body>");
javax.servlet.http.HttpSession hs = request.getSession();
if(hs != null) hs.invalidate();
out.println("<h1>You are Logged out now.....</h1>");
out.println("</body>");
out.println("</html>");
}
}
```

## **Page1.java**

```
package mypack;
import java.io.IOException;
import java.io.PrintWriter;
import javax.servlet.ServletException;
import javax.servlet.http.HttpServlet;
import javax.servlet.http.HttpServletRequest;
import javax.servlet.http.HttpServletResponse;
import javax.servlet.http.HttpSession;
```

```

public class Page1 extends HttpServlet {
    public void doGet(HttpServletRequest request, HttpServletResponse
    response)
    throws ServletException, IOException {
        response.setContentType("text/html;charset=UTF-8");
        PrintWriter out = response.getWriter();
        out.println("<html><head><title>Servlet Page1</title></head>");
        HttpSession hs = request.getSession(true);
        if(hs.isNew()){
            out.println("<body bgcolor=yellow>");
            String name = request.getParameter("txtName");
            hs.setAttribute("uname", name);
            hs.setAttribute("visit", "1");
            out.println("<h1>Welcome First Time</h1>");
        }
        else{
            out.println("<h1>Welcome Again</h1>");
            int visit = Integer.parseInt((String)hs.getAttribute("visit"))+1;
            out.println("<h1>You Visited "+visit+"Times</h1>");
            hs.setAttribute("visit", ""+visit);
        }
        out.println("<h1>Your Session ID "+hs.getId()+"</h1>");
        out.println("<h1>You Logged in at "+new
        java.util.Date(hs.getCreationTime())+"</h1>");
        out.println("<h1><a href=Page2>Click for Page 2 </a></h1>");
        out.println("<h1><a href=Page3>Click for Page 3 </a></h1>");
        out.println("<h1><a href=Page4>Click for Page 4 </a></h1>");
        out.println("<h1><a href=LogoutServlet>Click to Terminate Session
        </a></h1>");
        out.println("</body>");
        out.println("</html>");
    }
}

```

## Page2.java

```

package mypack;
import java.io.IOException;
import java.io.PrintWriter;
import javax.servlet.ServletException;
import javax.servlet.http.HttpServlet;
import javax.servlet.http.HttpServletRequest;
import javax.servlet.http.HttpServletResponse;
import javax.servlet.http.HttpSession;
public class Page2 extends HttpServlet {
    public void doGet(HttpServletRequest request, HttpServletResponse

## practical 3a

**.Create a Servlet application to upload and download a file.**

**index.html**

**<html>**

```

<body>
<form action="FileUploadServlet" method="post"
enctype="multipart/form-data">
Select File to Upload:<input type="file" name="file" id="file">
Destination <input type="text" value="/tmp" name="destination">
<br>
<input type="submit" value="Upload file" name="upload"
id="upload">
</form>
</body>
</html>

```

### **DownloadServlet.java**

```

package filedownloadapp;
import java.io.IOException;
import java.io.InputStream;
import java.io.PrintWriter;
import javax.servlet.ServletContext;
import javax.servlet.ServletException;
import javax.servlet.ServletOutputStream;
import javax.servlet.http.HttpServlet;
import javax.servlet.http.HttpServletRequest;
import javax.servlet.http.HttpServletResponse;
public class DownloadServlet extends HttpServlet {
public void doGet(HttpServletRequest request, HttpServletResponse
response)
    throws ServletException, IOException {
response.setContentType("APPLICATION/OCTET-STREAM");
String filename = request.getParameter("filename");
ServletContext context = getServletContext();
InputStream is = context.getResourceAsStream("/") + filename);
//ServletOutputStream out = response.getOutputStream(); // any of the
two works
PrintWriter out=response.getWriter();
response.setHeader("Content-Disposition","attachment; filename=\"\"
+ filename + "\""); // if comment this statement then it wl ask you
about the editor with which you want to open the file
int i;
while ((i=is.read()) != -1) {
out.write(i);
}
is.close();
out.close();
}
}

```

### **FileUploadServlet.java**

```

package fileservletapp;
import java.io.*;
import javax.servlet.*;
import javax.servlet.annotation.MultipartConfig;
import javax.servlet.http.*;
@MultipartConfig
public class FileUploadServlet extends HttpServlet {
    public void doPost(HttpServletRequest req,HttpServletResponse res)
    throws ServletException, IOException
    {
        res.setContentType("text/html");
        PrintWriter out = res.getWriter();
        String path=req.getParameter("destination");
        Part filePart=req.getPart("file");
        String filename=filePart.getSubmittedFileName().toString();
        out.print("<br><br><hr> file name: "+filename);
        OutputStream os=null;
        InputStream is=null;
        try {
            os=new FileOutputStream(new File(path+File.separator+filename));
            is=filePart.getInputStream();
            int read=0;
            while ((read = is.read()) != -1) {
                os.write(read);
            }
            out.println("<br>file uploaded sucessfully...!!!");
        }
        catch(FileNotFoundException e){out.print(e);}
    } }

```

### **web.xml**

```

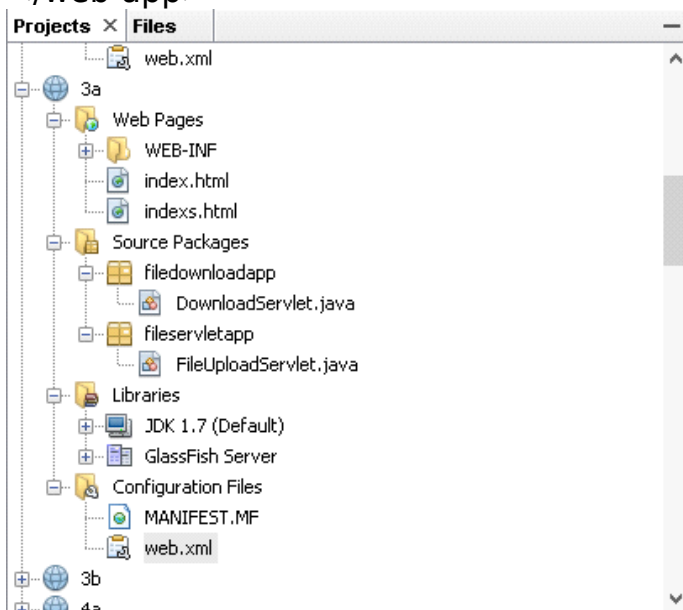

<?xml version="1.0" encoding="UTF-8"?>
<web-app version="3.1" xmlns="http://xmlns.jcp.org/xml/ns/javaee"
xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
xsi:schemaLocation="http://xmlns.jcp.org/xml/ns/javaee

    <servlet>
        <servlet-name>NewServlet</servlet-name>
        <servlet-class>mypack.NewServlet</servlet-class>
    </servlet>
    <servlet>
        <servlet-name>FileUploadServlet</servlet-name>
        <servlet-class>fileservletapp.FileUploadServlet</servlet-class>
    </servlet>
    <servlet>
        <servlet-name>DownloadServlet</servlet-name>

```

```

        <servlet-class>filedownloadapp.DownloadServlet</servlet-class>
    </servlet>
    <servlet-mapping>
        <servlet-name>NewServlet</servlet-name>
        <url-pattern>/NewServlet</url-pattern>
    </servlet-mapping>
    <servlet-mapping>
        <servlet-name>FileUploadServlet</servlet-name>
        <url-pattern>/FileUploadServlet</url-pattern>
    </servlet-mapping>
    <servlet-mapping>
        <servlet-name>DownloadServlet</servlet-name>
        <url-pattern>/DownloadServlet</url-pattern>
    </servlet-mapping>
    <session-config>
        <session-timeout>
            30
        </session-timeout>
    </session-config>
</web-app>

```

**OUTPUT**

### 3b. Develop Simple Servlet Question Answer Application using Database.

```
create database qadb;
use qadb;
create table quiz (qno varchar(5) PRIMARY KEY,question varchar(100),
op1 varchar(50), op2 varchar(50), op3 varchar(50), op4 varchar(50),
ans varchar(50)) ;
insert into quiz values('001','What is the capital of India??','New
Delhi','Kolkata','Chennai','Mumbai','New Delhi');
insert into quiz values('002','Who was the First President of India??','Dr.
Rajendra Prasad','Dr. S. Radhakrishnan','Ram Nath Kovind','V. V.
Giri','Dr. Rajendra Prasad');
insert into quiz values('003','What is ORM','Object Ratio Mean','Object
Rotation Measure','Object Relation Mapping','Oracle Request
Management','Object Relation Mapping');
insert into quiz values('004','Unit of Energy is ___','Dozon','Kilo Meter
','Joul','Hertz','Joul') ;
insert into quiz values('005',' --- is the smallest memory
unit.','bit','byte','Kilo Byte','Giga Byte','bit');
```

#### index.html

```
<html>
  <head>

### 3c. Create simple Servlet application to demonstrate Non-Blocking Read Operation.

#### index.html:

```
<html>
<head>
  <title>Non Blocking IO</title>
  <meta charset="UTF-8">
  <meta http-equiv="Refresh" content="0; URL=NonBlockingServlet">
</head>
```

```
<body>
</body>
</html>
```

## **NonBlockingServlet.java :**

```
package nonblkapp;

import java.io.*;
import java.net.*;
import javax.servlet.*;
import javax.servlet.http.*;

public class NonBlockingServlet extends HttpServlet
{
    protected void service(HttpServletRequest request,
        HttpServletResponse response)
        throws ServletException, IOException
    {
        response.setContentType("text/html;charset=UTF-8");
        try (PrintWriter out = response.getWriter())
        {
            out.println("<h1>FileReader</h1>");
            String filename="/WEB-INF/booklist.txt";
            ServletContext c=getServletContext();
            InputStream in=c.getResourceAsStream(filename);
            String path="http://" + request.getServerName()
                + ":" + request.getServerPort() + request.getContextPath() + "/ReadingNonBlockingServlet";
            URL url=new URL(path);

            HttpURLConnection
            conn=(HttpURLConnection)url.openConnection();
            conn.setChunkedStreamingMode(2);
            conn.setDoOutput(true);
            conn.connect();
            if(in!=null)
            {
                InputStreamReader inr=new InputStreamReader(in);
                BufferedReader br = new BufferedReader(inr);
                String text="";
                System.out.println("Reading started....");
                BufferedWriter bw=new
                    BufferedWriter(new
                        OutputStreamWriter(conn.getOutputStream()));
                while((text=br.readLine())!=null){
```

```

        out.print(text+"<br>");
        try{
            Thread.sleep(1000);
            out.flush();
        }
        catch(InterruptedException ex){} }
out.print("reading completed....");
    bw.flush();
    bw.close();
}    }    } }

```

### **ReadingListener.java :**

```

package nonblkapp;
import java.io.IOException;
import java.util.logging.Level;
import java.util.logging.Logger;
import javax.servlet.AsyncContext;
import javax.servlet.ReadListener;
import javax.servlet.ServletInputStream;
public class ReadingListener implements ReadListener {
    private ServletInputStream input = null;
    private AsyncContext ac = null;
    ReadingListener(ServletInputStream in, AsyncContext c)
    {
        input = in;
        ac = c;
    }
    @Override    public void onDataAvailable()
        throws IOException {    }
    public void onAllDataRead()
        throws IOException {
        ac.complete();
    }    public void onError(final Throwable t)
    {
        ac.complete();
        t.printStackTrace();
    } }

```

### **ReadingNonBlockingServlet.java:**

```

package nonblkapp;
import java.io.IOException;
import java.io.PrintWriter;
import javax.servlet.AsyncContext;

```

```

import javax.servlet.ServletException;
import javax.servlet.ServletInputStream;
import javax.servlet.annotation.WebServlet;
import javax.servlet.http.HttpServlet;
import javax.servlet.http.HttpServletRequest;
import javax.servlet.http.HttpServletResponse;
/** * * @author Beena */
@WebServlet (name = "ReadingNonBlockingServlet", urlPatterns =
{"/ReadingNonBlockingServlet"},asyncSupported = true )
public class ReadingNonBlockingServlet extends HttpServlet
{ @Override
protected void service(HttpServletRequest request,
HttpServletResponse response)
throws ServletException, IOException
{
response.setContentType("text/html");
AsyncContext ac = request.startAsync();
ServletInputStream in=request.getInputStream();
in.setReadListener(new ReadingListener(in,ac));
} }

```

## Output:

### Practical4a.

**Develop a simple JSP application to display values obtained from the use of intrinsic objects of various types.**

```

#### -----RRBean.java

```

package mypack;
import java.io.*;
import javax.servlet.*;
import javax.servlet.http.*;
import javax.ejb.EJB;
import mybeans.RRBean;
public class RBServlet extends HttpServlet {
    @EJB RRBean obj;
    public void doGet(HttpServletRequest request, HttpServletResponse
    response)
    throws ServletException, IOException{
        PrintWriter out=response.getWriter();
        String rt=request.getParameter("txtType");
        String cn=request.getParameter("txtCust");
        String cm=request.getParameter("txtMob");
        String msg = obj.roomBook(rt, cn, cm);
        out.println(msg);
    }}

```

**output:**

A screenshot of a web browser window. The address bar shows 'http://localhost:8888/6b/'. The browser tab is labeled 'localhost'. The form contains the following elements:

- Radio buttons for room type: ☐ Delux, ☒ Super Delux, ☐ Suit.
- Text input for 'Enter Your Name' with the value 'deepak pal'.
- Text input for 'Enter Mobile No.' with the value '098765432' and a clear button (X).
- Buttons: 'Reset' and 'Book Room'.

### **practical 8b.**

Develop a Guestbook Application Using JPA.  
JPA Practical using GuestBook

Steps:

1. Create Web Application with dedicated folder for Library

2. Add Simple java class or Persistent Entity class from Database (code below GuestBook.java)
3. Add SQL Connector Jar file to Library
4. Create Persistence Unit using jdbc connection to MySQL database
5. Create the JSP files (codes given below)
6. Run the Application.

### **GuestBook.java**

```
package asif;
import javax.persistence.*;
@Entity
@Table(name="GuestBook")
public class GuestBook {
    @Id
    @GeneratedValue(strategy = GenerationType.IDENTITY)
    @Column(name="VisitorNo", unique=true, updatable=false)
    private Integer visitorNo;
    @Column(name="VisitorName")
    private String visitorName;
    @Column(name="Message")
    private String message;
    @Column(name="MessageDate")
    private String messageDate;
    public GuestBook() {
    }
    public Integer getVisitorNo() {
    return visitorNo;
    }
    public void setVisitorNo(Integer visitorNo) {
    this.visitorNo = visitorNo;
    }
    public String getVisitorName() {
```

```

return visitorName;
}
public void setVisitorName(String visitorName) {
this.visitorName = visitorName;
}
public String getMessage() {
return message;
}
public void setMessage(String message) {
this.message = message;
}
public String getMessageDate() {
return messageDate;
}
public void setMessageDate(String messageDate) {
this.messageDate = messageDate;
}
}
}

```

### **index.jsp**

```

<html>
<body style="background-color: pink;">
Sign the Guest Book
<form action="GuestBookView.jsp" method="post">
Visitor Name: <input name="guest" maxlength="25"
size="50" />
Message: <textarea rows="5" cols="36"
name="message"></textarea>
<input type="submit" name="btnSubmit"
value="Submit" />
</form>
</body>
</html>

```

## GuestBookView.jsp

```
<%@page
import="java.util.*,javax.persistence.*,asif.GuestBook" %>
<%@page contentType="text/html" pageEncoding="UTF-
8"%>
<!DOCTYPE html>
